

SQAC CERTIFICATION PVT.LTD.

Verification Report for

Project : Contaminated River Treatment Project by SIIPL,
Pune, India.

UCR Project ID : 318

Name of Verifier	SQAC Certification Pvt. Ltd.
Date of Issue	April 24, 2023
Project Proponent	M/s Serum Institute of India Pvt Ltd. (SIIPL), Pune, Maharashtra.
UCR Project Aggregator	Egis India Consulting Engineers Pvt Ltd.
Work carried by	Mr. Santosh Nair & Ms. Sheetal Wader
Work reviewed by	Mr. Praful Shinganapurkar

Summary:

SQAC Certification Pvt. Ltd. has performed verification of the “Contaminated River Treatment Project by SIIPL, Pune, India”. The project activity by the Project Proponent is the installation and operation of a membrane bioreactor-based river water treatment and recycling plant since 16/12/2016, which results in clean and safe drinking water from a previously contaminated and unutilized water resource (Mula-Mutha River, Pune). This contaminated river (Mula-Mutha) is outside the project activity boundary and showcases the Project Proponent's commitment towards water stewardship and efficiency and is pre-approved under the UCR RoU program for Scope 4.

The project activity meets the following UN SDG's:

- 1 – SDG 1 No Poverty
- 2 – SDG 3 Good health and well being
- 3 – SDG 6 Ensure access to water and sanitation for all
- 4 – SDG 8 Decent work and economic growth
- 5 – SDG 13 Climate Action
- 6 – SDG 15 Life on Land
- 7 – SDG 17 Partnerships for the goals

Accredited by 5 Jupiter House, Callera Park, Aldermaston, Reading Berkshire RG7 8NN, United Kingdom (UK).

India Office: Off. No. 4, Fifth Floor, Buildmore Business Park, New Canca Bypass Road, Khorlim, Mapusa, Goa –

403 507

Email: info@sqac.in **Tel:** 7219716786 / 87

Verification for the period: **16/12/2016 to 31/12/2022.**

In our opinion, the total RoU's over the crediting / verification period stated in the revised Project Concept Note and Monitoring Report, PCNMR submitted to SQAC are found to be correct and in line with the UCR guidelines.

The verification was done onsite by way of site visit, interviews, document verification and submission through emails.

SQAC is able to certify that the RoU's from the Contaminated River Treatment Project by SIPL, India (UCR ID – 318) for the period 16/12/2016 to 31/12/2022 amounts to **33,86,129** RoUs

Detailed Verification Report:

The project activity is pre-approved under the UCR RoU program for the following scope:

- Scope 4 (Measures that remove bacteriological and other impurities from contaminated water bodies or unutilized water, so that water is made suitable for reuse and/or recycling purposes.)

Purpose:

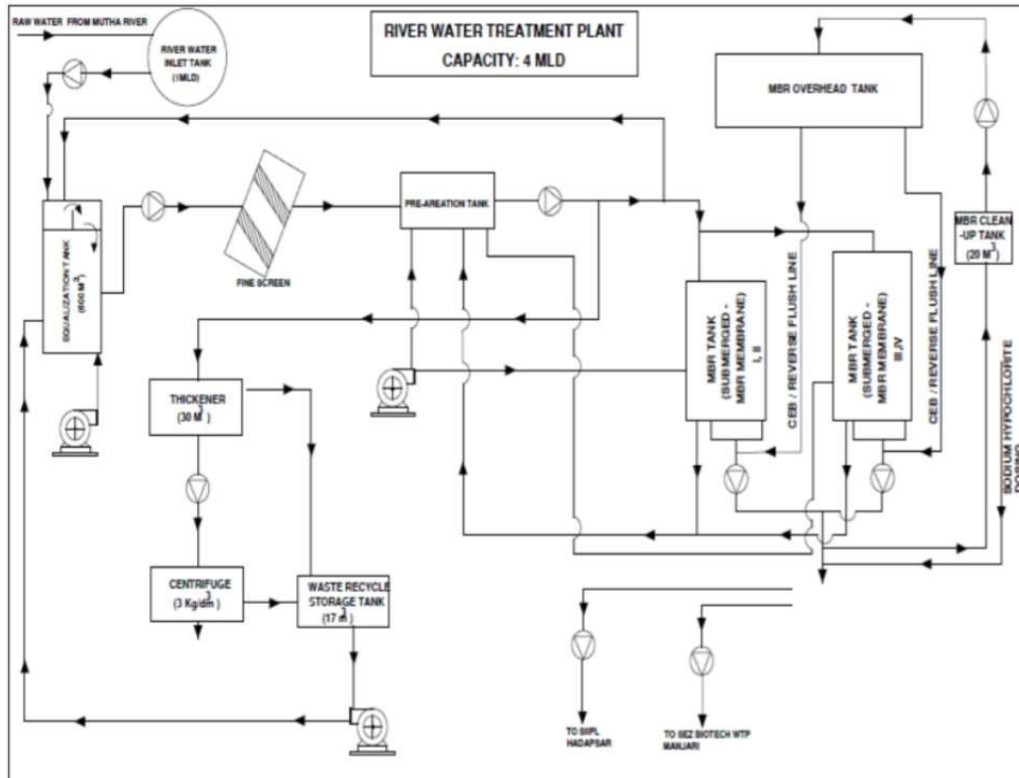

The project, Contaminated River Treatment Project by SIPL, Pune, India is located at Village Manjri, District Pune, State Maharashtra, Country India. The project activity is the installation of a four (4) million litre per day (MLD) capacity MBR (Membrane Bioreactor) based water treatment and recycling plant that results in the production of clean and safe water from previously contaminated and unutilized water in Mula-Mutha river. In the absence of the project activity, the Project Proponent would have installed bore wells that would have depleted the local groundwater resources and/or continued to use existing drinking water resources in the surrounding area.

The Project Proponent's daily water requirement is as follows:

Activity	Water Requirement (KL/d)
Potable water (for further purification)	2000
Cooling Tower	1800
Boiler	500
Domestic Use (washrooms, canteen, drinking)	150
Gardening	600
Total	5050 KL/d (~5MLD)

Of the daily water requirement, the project activity supplies 4 MLD. This pre-treated river water is further purified through Ultrafiltration + Reverse Osmosis + UV to generate safe drinking water. This potable water complies with all national and international standards like USEPA/WHO/BIS-10500.

Scope:

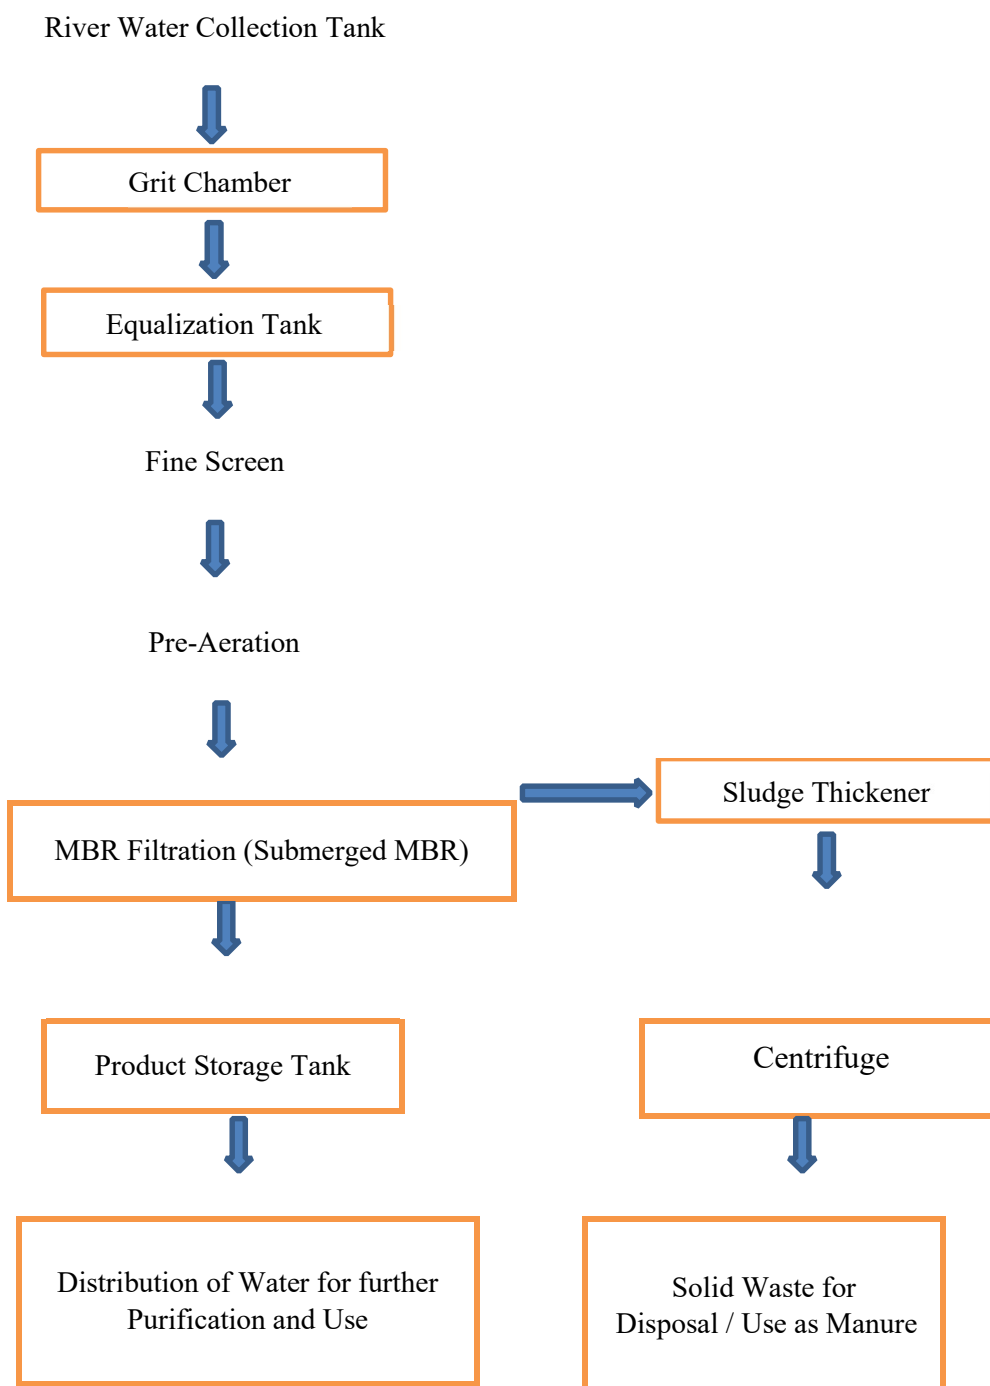

The scope covers verification of RoUs from the project - Contaminated River Treatment Project by SIPL, Pune, India, India (UCR ID – 318)

Criteria:

Verification criteria is as per the requirements of UCR RoU program for the scope – 4.

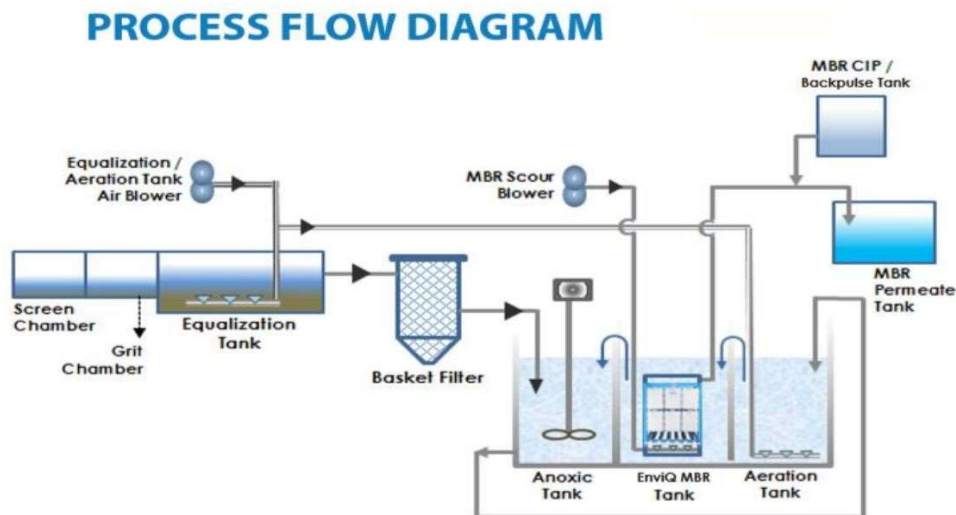

Description of project:

Treatment Flow Chart

Treatment Process

Mula-Mutha river water containing city sewage is pumped and stored in 1.0 million litre capacity storage tanks. From this storage tank, the river water is pumped to the equalization tank while passing through a grit chamber. The flow of the water is slowed down in the grit chamber so that dissolved solids, such as sand and other heavy particles, settle at the bottom of the chamber as sludge. The equalization tank acts as an additional buffer plus provides aeration to ensure proper distribution of sludge in the water and enhance microbial growth. The river water from equalization tank pumped to MBR tank through fine screens. The fine screens remove heavy and floating particles from the river water to protect the core filtration membrane. The pre aeration tank improves the microbial culture growth and provides even distribution of sludge.

Membrane Bioreactor (MBR)

MBR is a biological based submerged filtration system. MBR membranes are submerged in the water with continuous aeration. Aeration improves microbial growth and prevents sludge settlement on the membranes.

The pore size of the MBR is same as that of ultra-filtration membranes for water purification purposes. The river water is filtered through the MBR by applying suitable vacuum pressure. This filtered river water is stored in the product water storage tank where it's then chlorinated to maintain a level of 1.0 ppm to prevent microbial growth.

Microbes consume most of the contaminants in the MBR chamber. Part of the remaining solid waste (sludge) is passed through centrifuge to remove moisture and convert it to solid form. Solid waste from the centrifuge is rich in nutrients and used as manure for surrounding agricultural farms. The treated river water is then distributed for further purification and captive water use within the project.

boundary. The quality of the treated water is checked regularly by in-house labs. This pre-treated river water is further purified through a combination of ultrafiltration, reverse osmosis and UV light to create safe drinking water that complies with all national and international standards such as USEPA/WHO/BIS-10500.

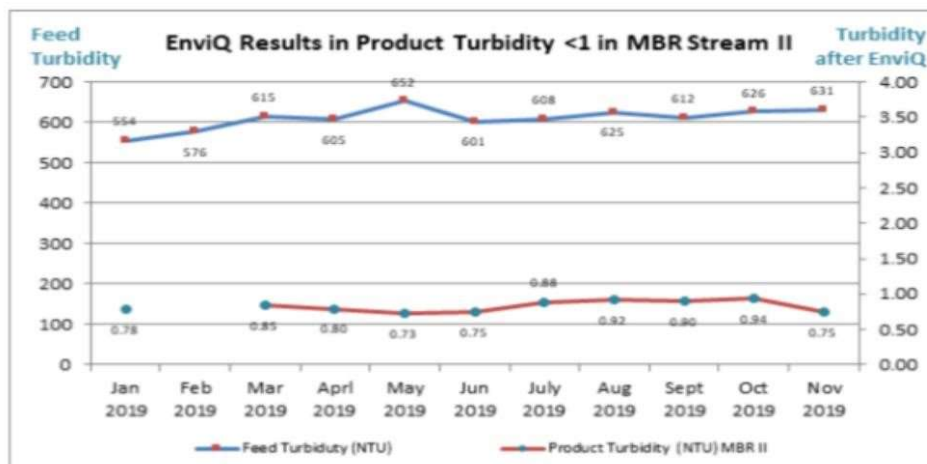

Description	Data
Model	EnviQ E32C
Manufacturer	QUA Group
Capacity	2 x 2 MLD (4 MLD)
Number of Modules	24 (12 Per Stream)
Outlet Turbidity	< 1 NTU
Outlet BOD	< 5 mg/L
Outlet COD	< 20 mg/L
Membrane Pore Size	0.04 μ

The installed MBR systems are robust and can handle organic river water fluctuations in load easily. As membranes are used as a physical barrier for solid liquid separation, these systems offer consistent high effluent quality in term of TSS and organic removal, and also require less chemical for disinfection. MBR systems take approximately one fourth the space of a conventional activated sludge system. The EnviQ flat sheet submerged ultrafiltration membranes have been specially developed to improve the ease of operation and maintenance of MBR facilities.

EnviQ is based on a unique patented technology that offers ultrafiltration quality product water with a stronger and more rugged PVDF flat sheet membrane. The unique features in EnviQ consist of reverse diffusion and specially designed air diffusers, which maximize scrubbing efficiency, lower pressure, and reduce cleaning. EnviQ membranes, with a pore size of 0.04 μ , are less prone to clogging, easy to operate and do not require any forced back wash.

The project activity achieves the following key water and sanitation related Sustainable Development Goals under the United Nation (UN-SDGs):

- ensures universal and equitable access to safe and affordable drinking water for all by 2030,
- ensures halving the proportion of untreated wastewater and substantially increasing recycling and safe reuse globally by 2030,
- substantially increases water-use efficiency across all sectors and ensures sustainable withdrawals and supply of freshwater to address water scarcity and substantially reduce the number of people suffering from water scarcity by 2030, and;
- expands capacity-building support within India in water and sanitation-related activities and programs, including water efficiency, wastewater treatment, recycling and reuse technologies by 2030.

PROJECT NAME : Contaminated River Treatment Project by SIIPL, Pune, India.

UCR Scope : RoU Scope 4: Measures that remove bacteriological and other impurities from seawater*, sewage and waste water, contaminated water bodies or unutilized water, so that water is made suitable for reuse and/or recycling.

PCNMR Prepared on : 02/04/2023.

Geo Tag : 18.51559, 73.96310

Latitude : 18°30'56.1"N

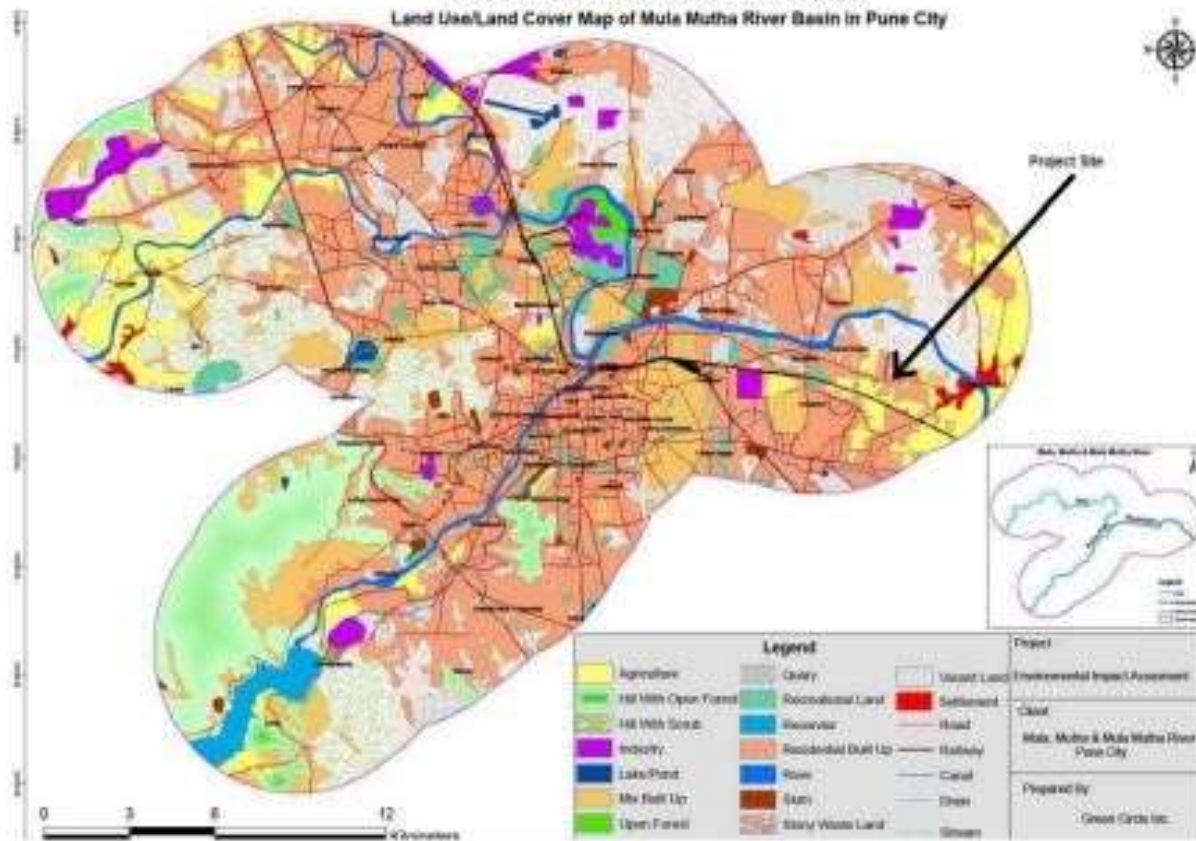

Longitude : 73° 57'47.2"E

Project Commissioning Date : 16/12/2016

Mula , Mutha and Mula-Mutha River
Land Use/Land Cover Map of Mula Mutha River Basin in Pune City

Rainfall

NA-The project activity is not a rainwater harvesting project.

Baseline scenario

The baseline scenario is the situation where, in the absence of the project activity, the Project Proponent would have installed bore wells that would have depleted the local groundwater resources and/or continued to use existing drinking water resources in the surrounding area.

Hence the baseline scenario is:

“The net quantity of treated water daily post MBR treatment”

The net quantity of treated water used is measured via flow meters installed at the site. For conservative purposes, the working days or operational days have been assumed at 330 days in a year.

Level of Assurance:

The verification report is based on onsite audit, information collected through interviews, supporting documents provided during the verification, Project Concept Note - Monitoring Report (PCNMR) submitted to SQAC. The verification opinion is assured provided the credibility of all the above.

Verification Methodology:

Review of the following documentation was done by SQAC Verifiers, Mr. Santosh Nair and Ms. Sheetal Wader, who are experienced in such projects.

- Project Concept Note / Monitoring Report (PCNMR)
- Sanction Letter from Executive Engineer, Khadakwasla Irrigation Department
- River Water Plant Analysis report
- CoA-Treated River water outlet sample
- Calibration Certificate
- Calibration Certificate - flowmeter

Sampling:

Not applicable

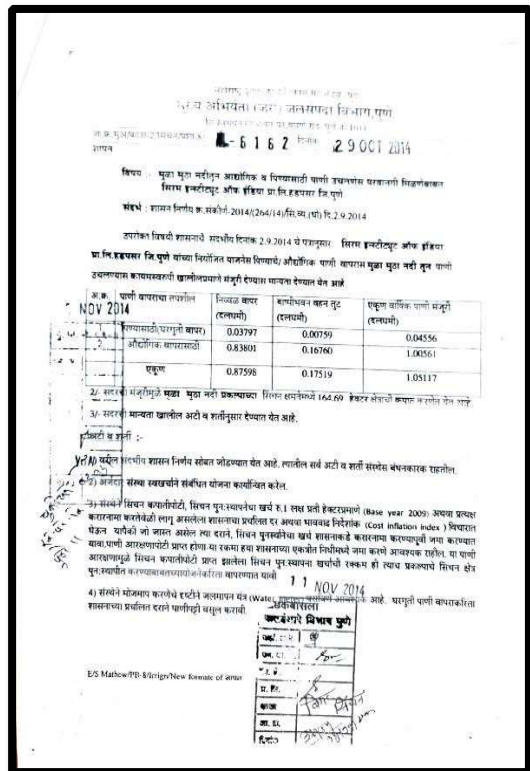

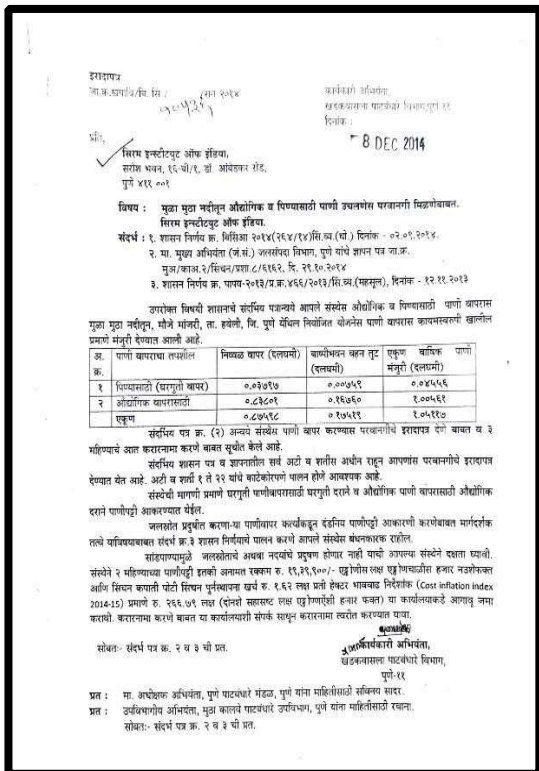

Persons interviewed:

1. Mr. Santosh Arankalle : Sr. General Manager, M/s Serum Institute of India Pvt Ltd.
2. Mr. Baban Chaudhari : Sr. Manager – Engineering, M/s Serum Institute of India Pvt Ltd
3. Mr. Saurabh Sainger : Sr. Project Manager, M/s. Egis India Consulting Engineers Pvt Ltd.

Documentation Verified:

- Project Concept Note / Monitoring Report (PCNMR)
- Operating Logbooks
- Daily River Water Plant Analysis report
- Sanction Letter from Executive Engineer, Khadakwasla Irrigation Department
- Water Lab Test Report
- CoA-Treated River water outlet sample
- Calibration Certificate
- Calibration Certificate - flowmeter

CALIBRATION CERTIFICATE

Certificate No: TCCS/CAL/2022/099927 Certificate Issue Date: 29-07-2022
Date of Calibration: 29-07-2022 Next Calibration Due Date: 29-07-2025
Calibrated At: Good Condition Calibration Method No: 3054-915-931
Work Order No: 11/12 Location: River water treatment plant outlet line
Date of Receipt: - Calibration Factor: -1.25514
Supplier Name: SERUM INSTITUTE OF INDIA PVT LTD
Customer Address: MANJARI, Pune 411033
Temperature: 25 ± 0.2°C Humidity: 40 to 60%RH

Name: ELECTROMAGNETIC Range: 0-100m³/h
Sr No: 11940488 L.C. Display: 0-100 m³/h
MAKE: KROHNE IP67 Accuracy: (H)±0.5% Of measured value
QA NO: TCCS161 Power Supply: 85-300V ACDC

Nomenclature: (Qm- Water Flow Meter) (Qv- Displayed Flow Rate) Line Size - DN 150 Ø"

Standard Used	ID No	Traceability	Certificate No	Valid Up to
Ultrasonic Flow meter	TCCS-EQ-06	CC-0088	2021-22/CP/214/11	04.11.2023

Calibration Results Parameter: Flow

WATER FLOW RATE (Qm)	INDICATED FLOW RATE (Qv)	UVC Reading (Actual/Qm)	Deviation in (Qv)
m³/h	m³/h	m³/h	%
29.600	29.450	29.200	-0.24%
89.800	89.780	89.600	-0.22%
89.800	89.180	89.180	-0.22%

Remarks: ALL THE INSTRUMENTS USED ARE TRACEABLE TO NATIONAL STANDARDS THROUGH REFERENCE STANDARDS AND THEIR CALIBRATION ARE VALID

List of Formulae Instrument % of Deviation in Qv = $\frac{Qv - Qm}{Qm} \times 100$

- Result are related only to the item calibrated.
- This certificate refers only to the particular items submitted for calibration.
- This certificate shall not be reproduced except in full without our prior permission in writing.
- Standard used for calibration were traceable to National / International standard.
- Calibration Method - comparison Method

Lab Test Reports-Water Quality Sampling Data

Flow Meter Calibration Test Report

Corrective Action Requests (CARs)

Not applicable as no non-conformities has been evidenced.

Applied methodologies:

Verification criteria is as per the requirements of UCR RoU program for the scope – 4.

Applicability of double counting emission reductions

Currently not applicable for water credits.

Issuance Period: (06 years, 16 days) – 16/12/2016 to 31/12/2022

According to the UCR RoU Standard principles, the project activity accomplishes the following:

- † **Increases the sustainable water yield in areas where over development has depleted the aquifer**
- † **Collect unutilized water or rainwater and preserve it for future use**
- † **Conserve and store excess water for future use**

Annual RoU calculation:

Year	RoUs (1000 litres) /yr
	UCR Cap (2 million RoUs/yr)
2016	9913
2017	259985
2018	439680
2019	487854
2020	705557
2021	745488
2022	737652
Total	3386129

Conclusions:

Based on the audit conducted on the basis of UCR Protocol, which draws reference from UCR RoU program, the documents submitted during the verification including the data, Project Concept Note (PCNMR), SQAC is able to certify that the Water Credits from the project - Contaminated River Treatment Project by SIPL, Pune, India. (UCR ID – 318) for the period 16/12/2016 to 31/12/2022 amounts to **33,86,129 RoUs**
